Company profile

Zijin Mining is a multi-metal producer mainly focused on gold and copper mining. In 2015, it was China's largest gold miner, second-largest copper miner and third-largest zinc miner. Through aggressive and inexpensive mine asset acquisitions, Zijin has strengthened its resources advantage, and positions itself in the lower part of the global cost curve.

Reverse roadshow: Zijin Zinc, a shining star on China's westernmost border

The takeaways from our 23 September visit to Zijin Mining key subsidiary Zijin Zinc are: 1) management is positive on zinc price, on tight supply, and sees RMB18,000-20,000/tonne as a fair price level in 2017; 2) construction of 50ktpa of zinc and lead capacity is under way and should come on line in 2018. Post expansion, Zijin Zinc is expected to generate net profit of RMB5.5bn over its mine's lifetime; and 3) cost could fall further, even after the 25% yoy cut in 1H16. Though bullish on zinc price, we remain cautious on gold and copper prices. Reiterate Hold and target price of HKD2.8.

Zinc price continues to gain support from tight supply

Amid tight concentrate supply, zinc price has performed strongly so far this year, rising 42% yoy on the London Metal Exchange and 32% yoy on the Shanghai Futures Exchange. Zijin Mining (Zijin) estimates global zinc concentrate supply fell by 10% yoy in 1H16, after closures and production cuts at large-scale zinc mines overseas. Looking into 2017, management expects supply to remain tight and domestic zinc price to stay at RMB18,000-20,000/tonne, underpinned by the improved supply-demand fundamentals.

Zinc segment: a new earnings engine

Zijin's strong copper volume growth and low-cost gold production is well recognized by the market, but the earnings potential of its zinc segment has possibly been overlooked. The company's flagship zinc operation — Zijin Zinc — already has 100ktpa of aggregate zinc and lead capacity; another 50ktpa is under construction and slated to come on line in 2018. After the expansion, Zijin Zinc will generate estimated annual net profit of RMB370mn, with only RMB300mn of expansion capex and a prudent average zinc price assumption of RMB15,000/tonne during the mine's lifetime. We expect a rise in the proportion of earnings Zijin derives from the zinc segment.

Significant cost cuts in 1H16, and still more to come

Zijin Zinc cut its production cost to RMB4,576/tonne in 1H16 from RMB6,121/tonne in 2015. The savings largely came from: 1) scale economies after 5ktpd ore processing project ramp-up; 2) staff cuts and greater mechanization; and 3) improved recovery ratio and reduced oxidation ratio of mined ores. Guidance is for further room to cut costs.

Zinc shines, but copper and gold lack luster, maintain Hold

Gold and copper together account for 60-70% of Zijin's earnings, so although we see strength in zinc price and production volume adding to earnings, our less positive outlook on the prospects for gold and copper prices leaves us reiterating our Hold call and DCF-based TP of HKD2.8.

A shining star out west

We attended a three-day reverse roadshow trip hosted by Zijin Mining last week, visiting the company's flagship zinc mine, Wulagen Mine in Xinjiang. Management sounded positive on the 2016-2017 zinc price, expecting it to average RMB18,000-20,000/tonne in 2017. Meanwhile, guidance is for steady zinc and lead volume growth, and further room for cost reductions in tandem with the increase in annual capacity. We maintain our cautious view on gold in the short term, and expect copper price to lack luster during 2016-2017E on intensive concentrate supply additions. In contrast, we are positive on zinc price during 2016-2017E, given supply constraints at large scale mines overseas. We maintain a Hold rating on Zijin Mining, and stick with our target price of HKD2.8.

The main upside risks to our view are strong-than-expected copper demand boosting copper price, and unexpected political or geographical risks stimulating the gold price. The main downside risks to our view are greater-than-expected copper concentrate supply additions, the US announcing more hawkish than expected monetary policies, and Glencore deciding to restart its zinc mine capacity.

Fig.1. View of Wulagen Zinc Mine, Xinjiang

Zinc price to average RMB18,000-20,000/tonne on supply constraint

The price of zinc has been robust so far this year, underpinned by a significant decline in concentrate output. Management expects supply discipline to continue and sees RMB18,000-20,000/tonne as a fair level for zinc price in 2017.

Australia has been the biggest zinc exporter to China. As a result of depletion at major zinc mines, Australian zinc concentrate production dropped by over 50% yoy in 1H16, according to Antaike. Meanwhile, late 2015 saw Glencore — the world's top zinc miner and trading house — shut down 500ktpa of zinc concentrate capacity, equivalent to 5% of global supply. Against a backdrop of large-scale mine closures and production

reductions this year, global zinc supply has dropped by over 10% yoy so far this year, per management. Management estimates the annual zinc deficit in the Chinese market will extend to 300 kilotonnes in 2016 (2015: 240 kilotonnes).

Fig.2. Zinc market balance

Global market ('000 tonnes)	2014	2015	1H15	1H16

New profit engine: zinc and lead volume growth to strengthen earnings

Zijin has historically been classified as a leading low-cost gold miner. While impressed by the significant copper concentrate growth in recent years, the market has been comparing Zijin with Jiangxi Copper and moving Zijin to the copper matrix. However, Zijin's zinc exposure often appears to be overlooked by market. The company has three major zinc mines at home and abroad: Wulagen Zinc Mine (Xinjiang), Wulate Houqi Zinc Mine (Inner Mongolia), and Longxing Mine (Russia). Zinc concentrate production increased by 78% yoy to 123 kilotonnes in 1H16, and the zinc segment accounted for 14% of total gross margin.

We think zinc segment is underestimated by the market as a potential new profit engine. We expect zinc mine production to grow by 35%/5%/2% yoy to 268/282/289 kilotonnes in 2016-2018E, respectively.

Flagship zinc mining base in the West: Wulagen Mine

Wulagen Mine (owned by Zijin Zinc) is located in Wuqia county, Xinjiang province, on China's westernmost border. It ranks in the top tier of China's zinc mines in terms of reserve scale: its combined reserves of zinc and lead amount to 5.9mn tonnes (end-2015). Ore processing capacity at the mine is the largest domestically (100ktpd in 2015); however, concentrate production is second to Fankou Zinc Mine due to the low grade of Wulagen's ore (2.7% versus 5.0% China average). Designed zinc and lead capacity at Zijin Zinc is 100ktpa, and is expected to increase to 150ktpa in 2017.

Low-cost producer

To counter the low grade of its ore compared with the industry average, Zijin Zinc has endeavored to place itself on the lower part of the Chinese cost curve, in four ways: 1) open-pit mining; 2) high recovery ratio; 3) reducing the oxidation ratio; and 4) intensive staff downsizing.

Open-pit mining. Mining an open pit has inherently lower costs than shaft mining. The ore deposits at Wulagen Mine are shallow and the large reserves are relatively easy to mine. Such characteristics create a suitable environment for open-pit mining.

High recovery ratio. Zijin Zinc's average recovery ratio rose to 86% in 1H16 from 76% in 2015, and management expects this number to increase to 90% by end-2018.

Reduced oxidation ratio. Oxidation ratio at the Wulagen Mine which has been cut to 28% in 1H16, against more than 40% when the project was initiated. Management is confident it can bring this number to 14-16% by 2018, after the ramp-up of new capacity.

Intensive staff downsizing. Zijin Zinc cut its headcount by over 50% yoy to 287 in 1H16, half the level needed by zinc mines of similar size. By applying advanced automatic mining monitoring, Zijin Zinc's staff requirement has been shrinking rapidly. In 1H16, ore processing volume per employee rose to 16ktpa, significantly above the industry average.

Zijin Zinc's all-in mining cost in 1H16 was RMB102/tonne (2015: RMB123/tonne). In other

words, unit zinc production cost was RMB4,576/tonne in 1H16 versus RMB6,121/tonne in 2015. Management guides for further cost reduction, on increased scale economies.

Stable volume growth underpins future earnings

Following Zijin's acquisition of Wulagen Mine in 2007, proven reserves at the mine have grown at a CAGR of 57% to 5.9mn tonnes (end-2013). Management guides for further proven reserve increases at Wulagen given the mine's significant potential. In terms of capacity expansion, Wulagen's status as an open-pit mine means it requires less capex and safety management to expand. Zijin plans to expand the mine's capacity to 25ktpd from 14ktpd currently; capex for the project will be kept strictly within RMB300mn, per management. The project is expected to begin trial production by the end of 2017 and after its ramp-up, Wulagen Mine's total capacity for zinc and lead will increase by 50ktpa to 150ktpa, extending the mine's life by 10 to 15 years.

Management makes the following assumptions: zinc price remains at RMB15,000/tonne; zinc production stays at 150ktpa; and cost remains at its current level. Post expansion, total net present value (NPV) of the project will be RMB407mn. On a conservative basis, Zijin Zinc estimates it will be able to generate RMB371mn in annual net profit during 2018 to 2032.

Quality concentrate ensures lower TC/RC than at peers

Zijin has been focusing on high margin upstream mining business: its concentrate output is mainly for external sales. Zijin Zinc realizes lower concentrate treatment and refining charges (TC/RC) than peers through selling high quality zinc concentrate: its average grade is 55%, versus an industry average of 48%. TC/RC fees for Zijin Zinc in September are RMB5,200/tonne, down by RMB1,300/tonne from April. Excluding transportation cost, which is paid by the buyer, the net TC/RC fees Zijin Zinc pays to downstream smelters amount to RMB4,000/tonne (industry average: RMB4,200/tonne).

Zinc shines, but copper and gold lack luster, maintain Hold

Global economic uncertainty and prolonged low interest rates in major economies should help support the gold price in the medium term. However, we are cautious on gold price in the short term, on increased expectation of a US interest rate hike by year-end and limited near-term upside momentum. For copper, we believe the strong volume growth of concentrate globally during 2016-2017 will create significant downward pressure on copper price.

Gold and copper together account for 60-70% of Zijin's earnings, so although we see strength in zinc price and production volume adding to earnings, our less positive outlook on the prospects for gold and copper prices leaves us reiterating our Hold call and target price of HKD2.8. Our target price is based on a DCF valuation with 9.5% WACC and a terminal growth rate of 2%.
